1. PREMESSA

In questa appendice sono riportati i grafici dei dati statistici mensili dei principali parametri monitorati dalle stazioni di rilevamento (benzene, CO, NO₂, O₃, PM₁₀, SO₂); i dati statistici sono anche riportati per l'intero anno.

Ogni grafico riporta i dati di un parametro secondo la tecnica dei box-plot; in ogni grafico sono riportati:

- la percentuale di funzionamento dello strumento di misura (linea continua con asse dei valori sulla destra);
- il valore minimo;
- il 5° percentile;
- la media;
- la mediana;
- il 98° percentile;
- il massimo.

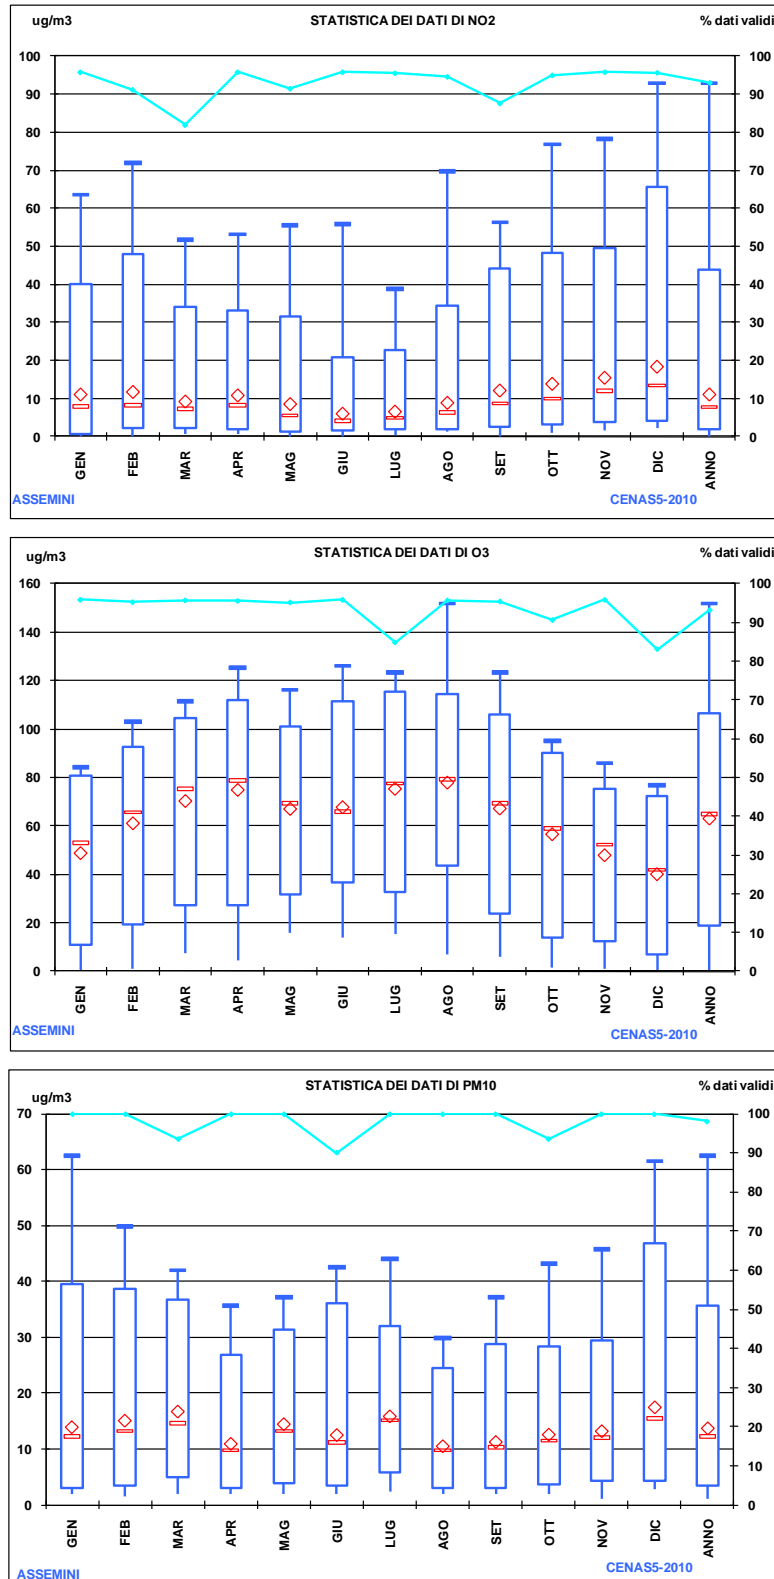

Gli elementi del box-plot corrispondono ai valori sopra riportati secondo la legenda data nella seguente figura.

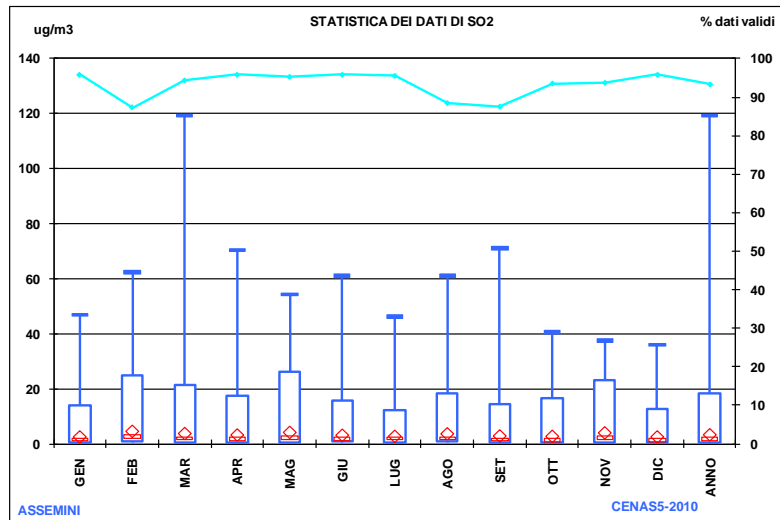

Gli elementi del box plot vengono riportati solo se la percentuale di funzionamento dello strumento nel mese raggiunge almeno il 25%. (eccezione fatta per CENCB2 e CEOLB1 che pure essendo solo stati installati per un periodo inferiore a 3 mesi nell'anno in corso, vengono comunque riportati in grafici). Per percentuali inferiori viene riportato solo il massimo misurato nel mese.
